

## Komainu Whitepaper June 2022

Welcome to Komainu, the start of an amazing journey!

We are the original Inu. We are pushing towards decentralization and counting on the hands of the community to be the leaders and to push Komainu. We like this because it gives the investors the responsibility for the project.

We have not paid for any marketing and don't plan on it because we are a zero percent fee token. So, if you want to promote Komainu we will support you! We want everyone to push the Komainu dream.

let's break this down.

The launch: We chose to launch on the Ethereum network because we love the leader Vitalik Buterin, and it is one of the most popular networks that people use.

We used one eth Liquidity Pool and as soon as we deployed it for Komainu, it was swapped out of our deployer and went right into Vitalik's wallet. So, it is his responsibility what to do with it. We also bought 10% of the supply and sent it to him, so he is the largest holder and has the biggest responsibility of the project to hold the floor and lead the way as he has in the past.

We didn't want to lock the LP on Team locker or Unicrypt because that is too centralized.

The Leaders: The amount you own is equal to your role in the project. The more you own the more responsibilities you have to guide and lead the way. For example, if you own 1% of the supply it is 1% of your duties to the community. Vitalik owns 10% so it is his biggest obligation to push the Komainu dream.

We encourage you to Always be kind to newcomers and introduce yourself. This is our hope and vision as we work towards Decentralization.

Tokenomics: We offer something special: 0% fees plus a 100% fair launch, which means no free tokens for the founders- who bought their own bags. Pretty simple, right!

The Future: The future is up to the community. This whitepaper will be the story and vision of this project as it progresses. To be continued
